1 · STUDENT INSIGHT & OBJECTIVE

Students don't want an AI workshop. They want an answer to “what have you built?”

- Audience: final-year engineering students, 3–6 months from placements, any branch.
- Insight: they trust classmates over ads and live in class/hostel WhatsApp groups; the job they hire a workshop for is a portfolio project.
- Objective: 500 registrations in 7 days, ₹2,000 budget, no paid ads, fully measurable by channel.
- Positioning: “Leave with a working AI app + GitHub repo you can demo in interviews — in 60 minutes, free.”
- Success = 500 registrations, ≥40% from ambassadors, cost per registration ≤ ₹4.

Three peer-led channels, one tracked funnel

Channel	Reach	Click	Clicks	Convert	Regs
Ambassadors + WhatsApp (40 amb. × ~3 groups)	12,000	10%	1,200	22%	264
Tech clubs & communities (15 clubs)	6,000	8%	480	30%	144
Peer referral + organic social	2,300	10%	230	40%	92
Total	20,300		1,910		500

Assumptions, not measurements. Risk: WhatsApp fatigue & ambassador skew → backup: 1:1 DMs, recruit Day-1 registrants. Clubs slow → ambassadors who are club members post directly.

3 · SEVEN-DAY ROLLOUT & ₹2,000 BUDGET

Front-load distribution, decide at mid-point, close with urgency

Day	Focus	Cum. target	Spend
1	Onboard 40 ambassadors; A/B messages live	40	₹0
2	Club announcement kits; first leaderboard	100	₹200
3	Peer share card + reminders	175	₹0
4	Mid-point: read Test 1, Copilot pace review; contingency decision	255	₹300*
5	Second club post + QR posters; support low ambassadors	340	₹400
6	“Seats closing” push	430	₹0
7	Final reminder; rewards (₹500 ambassadors + ₹600 referrers)	500	₹1,100

*Budget: rewards ₹500 · referrer prizes ₹600 · club kit ₹400 · posters ₹200 · contingency ₹300 (*released only if <80% of plan) = ₹2,000.*

4 · THREE GROWTH TESTS & MEASUREMENT

Hypothesis → test → metric, with a decision rule for each

Test	Hypothesis	Metric	Ship if
1 · Value prop	Placement message beats generic “learn AI”	Regs ÷ landing sessions per variant (v=)	≥20% lift, ≥150 sessions/arm
2 · Referral recognition	Leaderboard + personal tracking lifts ambassador output	Regs per active ambassador per cohort	≥25% more
3 · Form friction	Minimal form completes more than extended	Regs ÷ form starts per variant	≥10 pp, ≥80 starts/arm

Guardrails: group complaints, final-year share, ambassador drop-out. Measurement limit: views inside WhatsApp aren't observable, so rates start at the tracked landing session.

A working engine, not a landing page

- Registration: validation, normalized-email duplicate protection, referral attribution, confirmation ID, share card.
- Ambassador portal: unique codes, tracked links, WhatsApp-ready A/B messages, personal dashboard, leaderboards.
- Command Center: funnel, channel vs plan, colleges, ambassadors, budget, experiments — from stored data only.
- AI Growth Copilot: deterministic rules (pace, channel gap, college, ambassador skew, budget, late shortfall) with the numbers behind each call; optional LLM summary.
- Demo Simulation Mode: 3 seeded scenarios, all labelled SIMULATED and isolated from real records.
- Daily loop: read Copilot → pick 1 action → log decision → compare to plan next day.
